Cosemi Brings Ultra High-Definition 4K Fiber Optic Connectivity to the Home

Showcases OptoHD Active Optical Cables at CEDIA alongside Technology Partner Liberty AV Solutions

DALLAS, September 13, 2016 – This week at [CEDIA 2016](#), [Cosemi Technologies Inc.](#), a global leader in innovative high-speed connectivity solutions, will be on hand to highlight its [OptoHD™ active optical cables](#) (AOCs). Cosemi's [OptoHD AOCs](#) make it possible for integrated residential systems professionals to conveniently connect a multitude of devices for high-definition audio and video on any large monitor or display with an HDMI connection.

Home technology will take center stage at CEDIA 2016, with ultra high-definition 4K and 8K among the hottest topics. Offering enormous picture clarity improvements, these next-gen video standards require high-performance A/V interconnects to realize their full impact. Traditional copper connections are not capable of handling the new data and speed requirements now involved in interconnecting displays, media players, projectors, cameras, gaming systems, and virtual reality headsets.

Cosemi's active optical cable technology brings affordable, high-performance interconnects for the latest HDMI video standards – while greatly improving the user experience. By enabling the distribution of high resolution HDMI signals, Cosemi makes it possible for home technology enthusiasts to take advantage of the latest advances in 4K HD video content.

“At Cosemi, our ‘optical connectivity for all’ approach takes the powerful optical connectivity used in the telecom and datacom sectors and turns it into a convenient plug-and-play connection for various devices in the home and workplace,” noted Nguyen X. Nguyen, CEO for Cosemi. “Cosemi and CEDIA are both driven by vision, passion and innovation, and Cosemi brings these concepts to life by enabling the deployment of the latest technologies. From home theaters, conference room video systems and medical displays to digital signage and more – anywhere that a lightning-fast, powerful connection is needed – our AOCs bring the speed and distance that copper simply can’t.”

CEDIA 2016 is held at the Kay Bailey Hutchison Convention Center in Dallas, Texas from September 13-17. Cosemi will preview its OptoHD HDMI 2.0 AOCs at the Liberty AV Solutions booth #5310 on the show floor. An authorized Cosemi technology partner, Liberty AV Solutions is a global leader within the A/V marketplace that is known for its wide-ranging catalog of wire, cable, plates and panels and is a leading-edge supplier of digital solutions, networked media systems and a number of other new brands and product lines.

About Cosemi Technologies

A global leader in innovative high-speed connectivity solutions, Cosemi Technologies Inc. is focused on enabling optical connectivity everywhere. Cosemi designs and manufactures high-speed fiber optic components and active optical cables that form the building blocks for infrastructures supporting today’s unprecedented data growth. The company offers a comprehensive portfolio of quality solutions that service the data center, datacom/telecom, fiber in the home, fiber to the home, home entertainment and consumer electronics markets. Founded in 2006, Cosemi is the first fabless optical component solutions provider in the industry, and the company’s unique, unburdened business model allows them to pass on significant cost savings to customers.
